Foreword

Dear Smartphone user,

When buying **visCrypt** you chose an innovative software solution for Smartphones.

The combination with the patented and well-proven visual Key Technology grants that visCrypt is not only a comfortable but also a well protected encryption software.

This manual will lead you through the installation of visCrypt and acquaint you with the handling of the program. You will find information on the following topics:

1. Installation: The first chapter describes the installation of visCrypt.
2. Program documentation: Here you will find a detailed description of all features and settings of visCrypt.
3. The patented visual Key technology: This chapter is for those readers who want to learn more about how the program works and why the process is so secure.

Note: All functions of this software have been carefully tested on different devices. To our knowledge visCrypt runs faultlessly on all Smartphones with Windows Mobile Smartphone 2003 and higher.

SFR GmbH may not be held liable for any loss of data. Please read the information in the license agreement that will be shown during the installation (it may also be found in this manual).

visCrypt was developed for the operating systems Windows Mobile Smartphone 2003/2005/2006. Incompatibilities with other applications are improbable, but they cannot be ruled out entirely.

Should you have any problems with our software, please visit www.visCrypt.com and read our FAQ.

Additionally you will find our forum there which helps to solve many problems.

Alternatively you may send us an e-mail to support@sfr-software.com.

We hope you will enjoy visCrypt!

Winfried Schöttler

- CEO SFR GmbH -

Installation

Preliminary Remarks

In order that you may install and use visCrypt as easily as possible, our software developers created a convenient installation routine and intuitive software handling. The installation routine will run almost completely software assisted. Only where you have to choose between certain options you will get a message which may be answered with one click.

The suggested settings have been thoroughly tested, and we recommend that you confirm them.

The software installation of visCrypt is effected in two steps, which are described in this document in detail.

visCrypt cannot be installed on Smartphones directly. You must install it from your desktop PC by calling up the installation file.

In order to install visCrypt a connection between desktop PC and Smartphone must be established.

Should you have any problems with this connection, please refer to your Smartphone's manual, or ask the manufacturer of your hardware.

The following steps apply to a connection established with the Microsoft software ActiveSync®.

Installation on the desktop PC

ActiveSync Connection

Establish an "ActiveSync"-connection between your PC and your Smartphone.

Pay attention to the **green control light**. It symbolizes an existing connection throughout the first installation step.

A **gray control light** means that there is no connection. In this case please try to reconnect.

Note: If you cannot establish an "ActiveSync"-connection, try restarting your PC with the Smartphone still connected.

Start Setup File

Start the installation file on your PC.

The installation routine will greet you with the "Welcome"-screen.

Please read it and confirm with "**Next**".

Accept license agreement

Finally you will be shown the license agreement for visCrypt.

If you want to install and use the software, please accept the license terms.

The regulations may also be found in this document.

Software installation

visCrypt will now contact your Smartphone's operating system and begin with the actual software installation.

Define installation directory

Now you will be asked to define the directory for the installation of visCrypt on your Smartphone.

Finish copying process

When the copying is finished you will get a message. Please confirm this message with "OK"

Starting the software after Installation

You may find visCrypt in the start menu of your Smartphone.

Program documentation

Starting visCrypt

If visCrypt is installed correctly on your Smartphone, you will find the icon to start the software in the start menu of your Smartphone.

After starting, visCrypt will ask you to enter your master password.

The password wizard of visCrypt

If you are using visCrypt the first time or you want to change your master password, visCrypt will guide you through the process of password definition step by step.

First you must select the password type (login type).

Then you can define your new password.

Enter your password into the first field and step to the next field with the "down" button of your Smartphone. Enter your new password there, too. Confirm your new password with "OK", to save it.

The screenshot shows the password definition screen. The title bar says "visCrypt - Password". It has two input fields: "Define password" containing "*" and "Verify password" which is empty. At the bottom are "OK" and "Menu" buttons.

The password file of visCrypt

After defining your first or a new master password, visCrypt refreshes the password file. Your master password and this password file is necessary for visCrypt to decrypt your files and documents.

The password file is named "**visCrypt.conf**" and is laying hidden in the folder "My Documents" on your Smartphone. You can see this file over an ActiveSync connection on your PC and take a copy there.

Please store an actual copy of this file **outside of your Smartphone**, to be able to decrypt your files (maybe on a storage card) even after a hard reset of your Smartphone.

You should always backup the password file after changing your password.

The main screen

visCrypt - Files	
	Size
<input type="checkbox"/> ..	
<input type="checkbox"/> My Pictures	69.4K
<input type="checkbox"/> My Ringtones	0B
<input type="checkbox"/> Templates	0B
<input type="checkbox"/> Memo.TXT	1.17K
<input checked="" type="checkbox"/> README.TXT.VCY	1.20K

Up **File**

The main screen contains a table (list view), that shows the contents of the currently selected folder. There are up to two columns. The first column shows the filename or the folder name. The second column shows the file and folder size, if this column is activated in the settings.

Navigation is quite easy:

- Mark a folder and "activate" it (center button of your navigation buttons) to show its contents.
- Mark and activate the top folder ("..") or tap the action button "Up" to change to the parent folder.

The table header shows the name of the current directory.

To encrypt a file just mark the check box beside and click on "Encrypt" in

the menu bar.

Decryption is done similar.

If you have marked both, encrypted and decrypted files, click on "Process" in the menu bar. The files then are being processed according to their state.

The file menu

The action menu

Functions of visCrypt for the currently selected list entry can be found in the action menu (first entry of the file menu).

For a file, visCrypt offers the following functions:

- Encrypt or decrypt the selected file (according to its state)
- Execute the file
- Copy, Cut and paste the file
- Delete and rename the file
- Create a new folder
- Show file information (see below)

For a folder, visCrypt's action menu offers the following functions:

- Encrypt the folder (this means encryption of all files in this folder and all sub folders)
- Decrypt the folder (this means decryption of all files in this folder and all sub folders)

- Copy, Cut and paste a folder
- Rename and delete a folder
- Create a new folder (same level)
- Show folder information (see below)

Additional functions

In the "View" menu you can change the shown content of the list view:

- With "Show en-/decrypted files" you can filter the list view contents for files with the selected state.
- If you deactivate "Show folder structure", all files of all folders are being displayed in the list view. So you don't need to navigate through subfolders.
- If you activate "Show All Files", visCrypt show hidden files in the list view.

In the file menu you can find additional functions for the list view of visCrypt and more:

- With "Change password" you can enter the password wizard screen to define a new master password.
- With "Select all files" you can mark all files in the list view.
- With "Clear selection" you can unmark all files in the list view.
- With "Exit" you can leave visCrypt.

- With “Refresh” you can refresh the list view.

In the “Go to folder” menu you can see the last shown folders and open them simply clicking a folder name there.

In the “Undo” menu you can see the last encryption actions and undo them step by step or all together.

Information for files and folders

In the action menu you will find the item "Info".

Selecting this item will open a new screen showing information about this file.

Some of this information can be changed and saved, like filename and file attributes.

visCrypt - File info abc Yx

File information

Filename:	Memo.TXT	
Path:	\My Documents	
Size:	1.17K (1202 Byte)	
Created:	9/11/2008 1:19:38 PM	
Changed:	9/11/2008 1:19:38 PM	
<input checked="" type="checkbox"/> Archive	<input type="checkbox"/> Readonly	<input type="checkbox"/> Hidden

Save **Cancel**

visCrypt - Folder info Yx

Folder information

Name:	\My Documents
Path:	\
Size:	71.8K (73550 Byte)
Content:	4 file(s), 3 folder(s)
Created:	4/8/2007 1:54:44 AM
Changed:	4/8/2007 1:54:44 AM

Cancel

Selecting this menu item, while a folder is currently selected, opens the folder info screen.

Settings

In the settings screen you can set your preferred options for visCrypt.

The “general” page contains:

- Language: Select the language for the user interface.
- Shutdown after: Select, how long visCrypt will stay opened without activity.
- Start file after decryption: If activated, a decrypted file (in windows file explorer) will automatically be started with the linked application.
- Instantly reencrypt afterwards: If activated, a decrypted and opened file will be reencrypted after closing the file automatically.
- Show size column: Will activate the size column
- Delete original file after processing: If a file gets en-/decrypted, the “original file” will be deleted on success.
- Enabled Logging: If activated, all important actions in visCrypt will be documented in a log file.

With “Save” all changes will be saved to disk. visCrypt needs to restart to get all new settings up and working.

Information and activation

Enter your purchased license key in this screen to register visCrypt.

Confirm your input with "OK" afterwards.

If you mistyped the code, please correct your input and confirm again.

The menu item "Info" in the file menu of visCrypt opens an information screen. You can find version information of visCrypt and a short description and manual of the program here.

The second menu item of this screen opens the activation code screen.

Please enter your visCrypt Activation Code:

Log

visCrypt can log all important actions into a log file to control usage later on.

The log function needs to be activated in the settings screen of visCrypt.

Close visCrypt

Select "Exit" in the file menu of visCrypt to leave the program.

Uninstall visCrypt

If you want to uninstall visCrypt, you should do this just like in the installation process using an ActiveSync® interface.

Start the ActiveSync-software with a double click on the symbol in the task bar.

Call up the option "**Add/Remove Programs...**" in the menu "**Tools**".

Deactivate the control box beside the entry "**SFR GmbH visCrypt Smartphone**" in the following dialog box by clicking on the checkbox to delete it.

Click on "**Remove**" to start the uninstall process.

If you are sure you want to remove visCrypt confirm the following message with "**OK**".

visCrypt will now be deleted completely from your Smartphone. If you want to use visCrypt later on to protect your data, you will have to reinstall the software as described in the chapter "**Installation**".
